Role Based Action Management DB Model

MySql

user_has_role

id	user_id	role_id

users

id	name	phone

roles

| id	role_name

action_has_permission

id	action_name	role_id

For each user action request, need to verify user role from user_has_role table
and verify the action permisson of the user role from action_has_permission table.
If all ok, then user will get access of the action.

Example_Of_Action: Create_Catagory, Create_Product
